

Meetings & Events

“The LEC supplies me with information on the status of lignite in the region and provides opportunities to discuss it with industry personnel. It gives me more insight on what to expect for my business.”

Tim Klein
Castrol Industrial

Meetings

Contractor / Supplier Meeting

Each spring, the Lignite Energy Council hosts a meeting for its contractor/supplier members. Executives and top management of mining companies, investor-owned utilities, rural electric cooperatives and the Dakota Gasification Company brief contractors and suppliers on present operations and plans for projects or expansion. This meeting is also attended by the procurement staffs of the respective companies and cooperatives. They are available to answer questions about bidding procedures and procurement requirements.

Annual Meeting

The Lignite Energy Council holds its annual meeting in the fall. It features presentations by leading government officials and key lignite industry personnel on important lignite-related issues. Members are given valuable opportunities to share ideas and make plans for the coming year.

Services

Logo Decals

Contractor and supplier members receive Lignite Energy Council logo decals for use on their correspondence with major producer and major user members. This serves as a reminder to all members to support, when appropriate, contractors and suppliers who are members of the Lignite Energy Council.

Newsletters

Lignite Energy Council members receive the Member Update, a newsletter that keeps them informed and up-to-date on issues affecting the lignite industry. Members also receive the Inside Scoop, which provides contractor/supplier members with a monthly update on information on upcoming projects and contracts.

Buyers Directory

The Buyers Directory is part of our Web site and lists all contractor/supplier members. Key personnel and the business addresses and phone numbers of every contractor and supplier company are included. The Directory is available to all members, including the management and procurement staffs of the producer and major user members.

Web Site

The Lignite Energy Council's Web site at: www.lignite.com features a lot of information on the lignite industry. The Web site also includes a “members only” section, providing timely and valuable information to members.
